

A scatter plot showing the relationship between Alcohol Content (X-axis) and another variable (Y-axis). The X-axis ranges from approximately 50 to 350, with major ticks at 100, 200, and 300. The Y-axis ranges from approximately 0 to 100, with major ticks at 0, 20, 40, 60, 80, and 100. The data points are black dots, and a solid blue line represents the linear regression. The regression line shows a positive correlation, starting at approximately (50, 10) and ending at approximately (350, 90). The data points are clustered around the line, with some outliers at lower alcohol content and lower values on the Y-axis.
